About

Software Engineer with solid experience in React (Next.js) and Node.js (Nest.js), focused on building high performance optimization, secure authentications, and scalable interface design. Approaching to transform product requirements into technical solutions that positively impact business metrics, such as increased conversion and reduced usability response times. Guaranteeing quick and modern web development and committed to technical excellence and product vision in agile teams. Currently seeking Full-Stack positions, concentrating the efforts to contribute to the development of robust, creative and high-quality solutions, as well as improving enterprises professional environments.

Skills

- Effective communication between technical and product areas
- Collaboration in agile methodologies (Scrum, Kanban)
- Autonomy and responsibility in deliverables
- Analytical, creative thinking with a focus on problem-solving
- Continuous learning and adaptation to new Technologies

Knowledges

- **Programming Languages:** JavaScript (advanced), TypeScript (advanced)
- **Frameworks:** React.js, Next.js, Nest.js, ReactNative
- **Styling:** Tailwind CSS, Styled Components, Shadcn/UI
- **Infrastructure:** Docker, Git, CI/CD, TDD, SOLID
- **Databases:** MySQL, PostgreSQL, MongoDB
- **Other:** REST API integration, JWT auth, Vercel deployment

Languages

- **Portuguese:** Native
- **English:** Advanced/Fluent (B2)

Experience

Tech Analytics Systems (TAS)

Remote

FrontEnd Developer

(Apr 2024 - Feb 2025)

- Restructured the JWT-based authentication flow through custom middlewares in Next.js API Routes, reducing login errors by 40%.
- Rebuild the UI using React and Redux, applying lazy loading and optimizing component rendering to improve performance. This reduced load time by 60% on high-traffic pages, increasing retention for end users.
- Introduced monitoring with AWS CloudWatch, allowing proactive adjustments to performance and network usage.
- Reduced the response time of the user data API from 8s to 3s through caching and query optimization.
- Collaborated with a cross-functional team of 7 members to deliver high-performance web features, improving user experience and reducing bug turnaround time by 25%.
- Contributed to CI/CD workflows with GitHub Actions and Docker, ensuring consistent deployments across all environments.

Education

Universidade Federal do Ceará

B.E Computer Engineering

Sobral, Ceará, Brazil

(Aug 2022 - Mar 2027)
